### WA Conditioned Racing System Review & Comparison with National Ratings Based Handicapping System

WA's Conditioned Racing System has been operational for 10 months and the system continues to deliver improvements for the wagering customer with reduced numbers in short priced favourites and short priced winners.

It's difficult to substantiate the reduction in short priced favourites and winners has converted to an increase in turnover and race fields' revenue for WA racing.

Mindful that WA is running a standalone handicapping and programming system we continue to monitor WA's performance against the National RBHS.

Although the National RBHS statistics are generated from the combined results of the participating States and the WA results are standalone figures the comparative figures below indicate both systems are achieving similar outcomes
